

1) Blog page polish

1.2 Blog card layout (image + text)

Current problem:

Changes:

- Remove:
 - Blog
Insights and updates from the DYNA team
- Replace
 - Insights & Coverage
Company updates and external media coverage of DYNA
- Display the 3 stories in one row of three (3 across) with dates below (example from Perplexity AI Blog page shows how they fit everything into one line, you can do the same thing). You can make our current blog post picture boxes smaller so that the “Insights & Coverage Company updates and external media coverage of DYNA”, three boxes and dates within one page
 - This 3 stories in a row change is temporary until we publish the Monster Laundry story (then we can revisit layout).

- Make all blog/stories card images consistent:
 - Same aspect ratio (all portrait, or all same crop)
 - Same visible size on the page
 - No cut-off of image content
 - Remove one line summary
 - Title for “DYNA Founders & Fortune Feature” should be replaced with “Exclusive: Instacart bought his self-checkout startup for \$350M. Now he’s teaming with a Google DeepMind alum to build low-cost robots”
 - Title needs to reach the left and right edges of the pictures
 - The space between edge of picture and the title must be the same amount of space between
 - Remove “Read more” button.
-

2) Top navigation and click issues

2.1 “Company” dropdown usability (hard to click)

Current problem:

- Clicking “Company” is hard because the dropdown disappears too easily for some users (needs a continuous mouse movement).

Fix:

- Make the dropdown easier to use:
 - Dropdown should not disappear immediately when moving the mouse
 - Add hover delay or allow click-to-open and click outside to close
 - Make it work reliably on normal laptop trackpads

2.2 “Company” destination page (no About page)

Requirement:

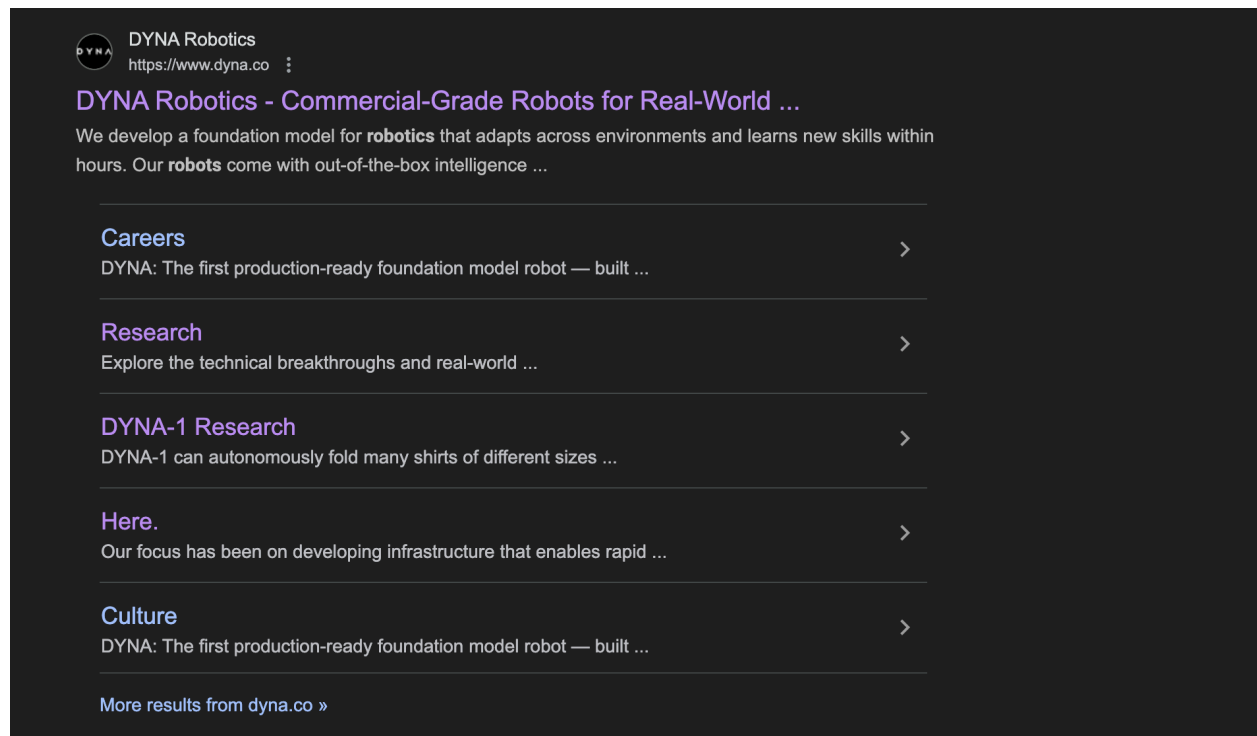

- If users click “Company” from Google or the nav bar, we want it to go to our mission/vision page (our “About” page).

Change:

- Ensure “Company” routes to the Mission page (Vision/Mission content).

3) Google search sitelinks (SEO)

When someone searches “Dyna robotics” on Google, the sitelinks are not what we want.

3.1 Fix sitelinks order and labels

Target sitelinks should be:

- Research
- Blog
- Careers

- Company (go to Mission page)

Problems we saw:

- Google shows two “Research” entries sometimes.
- There is a weird “Here” link.
- Careers sometimes appears first.
- This is likely a semantic/internal linking issue (Google chooses based on site structure).

Changes to implement:

- Remove duplicate/extra links that cause Google to think “Research” is two separate top-level destinations.
- Make the “Blog” link clear and explicit (the “here” should link to Blog properly).
- Improve site structure so Google understands the true top-level nav destinations:
 - Research
 - Blog
 - Careers
 - Company -> Mission

Note:

- This is not only a “Google issue”. It is also how our internal links / nav hierarchy are set.

3.2 Fix the “Series A” / “stitch” item

We saw a “stitch” item that sends users to the Series A blog page.

- Change that label to “Series A”, or remove it completely.

- Also, we noticed two items were going to the same page. If two links go to the same page, keep only one.
-

4) Homepage CTA and Contact flow (major change before CES)

4.1 Main CTA wording consistency (homepage button vs landing page)

Current problem:

- Homepage button says “Request a demo”
- After clicking, the page says “Start deploying”
- This feels inconsistent and confusing.

Requirement:

- Button text and landing page headline must match.

We discussed two possible directions. Implement the decision below.

4.2 Decision: Replace “Request a demo” with “Contact us”

We agreed the main goal is giving people a fast way to reach us (not only deployment).

So:

- Replace the homepage CTA “Request a demo” with “**Contact Us**”
 - **Need Help In Your Industry** button in Industries section of home page should go to the Contact Us page
 - Create a new “Contact Us” page and remove start your deployment section on home page but you can keep join our news letter section
-

5) Contact Us separate page and Typeform-style questionnaire (must be simple, not heavy)

Current problem:

- The existing form in “Start Your Deployment” in home page is too long and too heavy, it blocks people who just want to talk or learn more.
- But we still want to collect useful info for future sales workflow. We want it to look like the Contact Us page in travelx.io

travelX

About Us News Join Us Contact Us

Choose your profile

Airline Technofile Investor None of the above

Full Name* Company

Name Airline

Country* Email*

Select your country email@airline.com

Message

I'd love to hear more about TravelX!

GLOBAL CHANGE (VERY IMPORTANT)

- Remove the “Request a demo” button in home page
- Replace them with “Contact Us”
- Clicking **Contact Us** or Need Help In Your Industry? Should always goes to the **Contact Us page** (not “Start deploying” as Start Deploying section in home page should be completely removed)

5. CONTACT US PAGE (FINAL, CORRECT STRUCTURE)

5.1 Contact Us entry point

- Homepage primary CTA: **Replace Request a demo button to Contact Us button**
- Both link to the same **Contact Us page**

5.2 Contact Us form logic (branching, Typeform-style)

Step 1 — FIRST QUESTION (must be first)

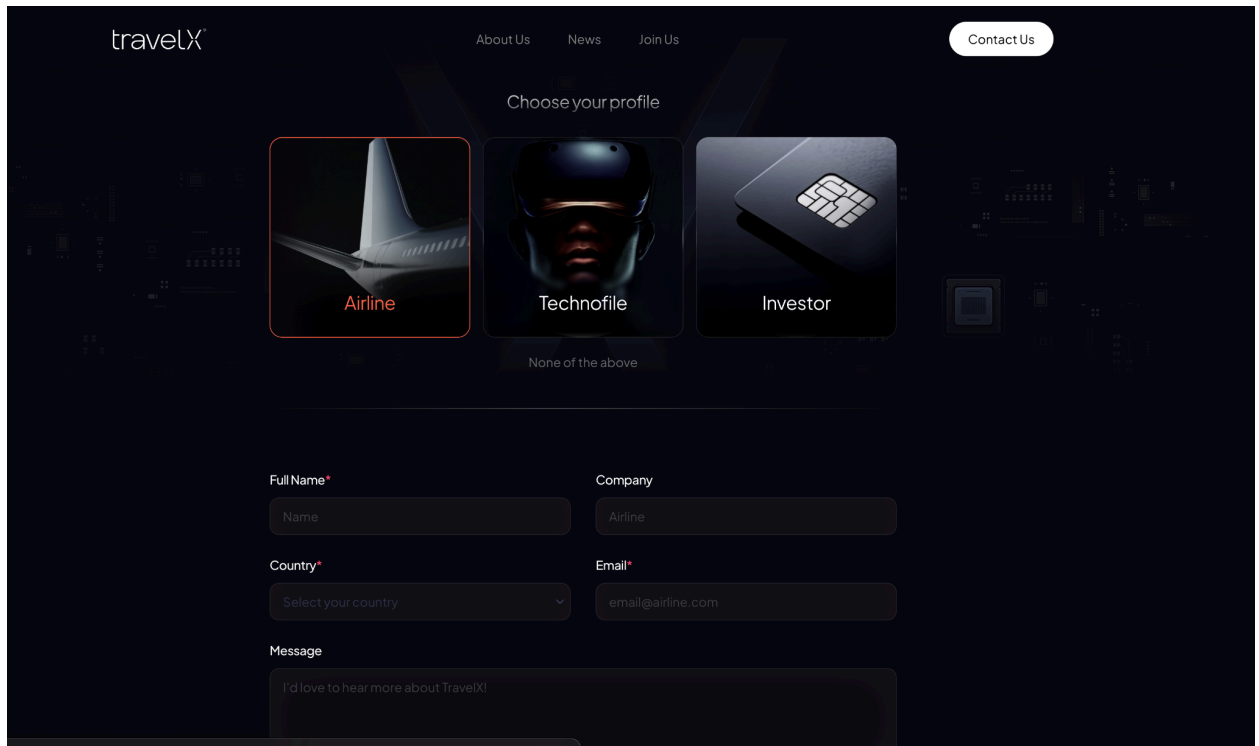

Question:

Choose your profile

4 boxes in a row options like travex.io:

- **Business Customer**
- **Media**
- **Investor**
- **Other**

This question always comes first.

We want similar images like above

Ask these for all profiles:

- **Full Name**
- **Work Email**
- **Title**
- **Company**
- **Company Size**
- **Country** (optional)
- **Message** (free text)

Message placeholder text:

“I’d love to know more about Dyna!”

Do **not** skip these questions for any profile.

5.3 Business Customer path (additional questions AFTER common fields)

Only if the user selects **Business customer**, show the following.

Gating question (customer-only)

Question:

“Do you already have a specific use case?”

Options:

- Yes
 - No / Not sure
 - Multiple use cases, want to explore
-

If the user selects Yes or Multiple use cases

After the common contact fields, ask:

- Use Cases (required)
- Location of Sites (State / Country) (optional)
- Units Needed (optional)
- Upload Image / Video (optional, must be available)

Important:

Uploading images/videos is very valuable. Customers often share workflow videos (for example, trade shows or current operations). Keep this feature.

If the user selects No / Not sure

- Do **not** require **Use Cases**
 - Allow submission using only the common contact fields and message
-

5.4 Media path

After the common fields, **do not ask any additional required questions.**

Fields:

- Full Name
- Work Email
- Title
- Company
- Company Size
- Message

Keep this very lightweight.

5.5 Investor path

Same structure as Media.

Fields:

- Full Name
 - Work Email
 - Title
 - Company
 - Company Size
 - Message
-

6) Contact submissions routing (VERY IMPORTANT)

All submissions must be collected and routed correctly based on profile type.

6.1 Business Customer submissions

- **Store all data in the existing admin dashboard:**
👉 <https://www.dyna.co/admin/login>
- This includes:
 - Common contact fields
 - Use Cases (if provided)
 - Uploaded images/videos
- This dashboard remains the **system of record** for customer inquiries.
- Do **not** remove or bypass the dashboard.

6.2 Media submissions

- Send an email notification to the Google Workspace Group:
media@dynarobotics.ai
- Email should include:
 - Profile type = Media
 - Name
 - Company
 - Work email
 - Message
- Media submissions do **not** need to go into the admin dashboard unless technically unavoidable.

6.3 Investor submissions

- Send an email notification to the Google Workspace Group:
investors@dynarobotics.ai
 - Email should include:
 - Profile type = Investor
 - Name
 - Company
 - Work email
 - Message
 - Investor submissions do **not** need to go into the admin dashboard unless technically unavoidable.
-

6.4 General requirements for routing

- Every submission must go **somewhere reliable**:
 - Customers → Admin dashboard
 - Media → media@dynarobotics.ai
 - Investors → investors@dynarobotics.ai
 - Email notifications are required so nothing is missed.
 - This setup must **not block future HubSpot integration**.
 - Profile type must be clearly labeled in:
 - Stored data
 - Email subject lines (recommended)
-

7) Homepage moving logos section (confusing)

Changes:

1. Update the text above/near the moving logos to clarify what the logos represent.
 - Use this exact sentence:
 - “Our team brings experience from renowned universities and research labs.”
 2. Reduce spacing:
 - Add space between the logos section and the “Careers” area so it reads correctly
 - Also squash/minimize the empty space between:
 - moving logos bar
 - “View careers” button
-

Deliverables checklist (so we can review fast)

1. Blog/Stories page looks clean, consistent images, better spacing.
2. Press stories simplified: no dates, no summaries, real headlines, headline clickable.
3. Stories page shows 3 items in one row of three.
4. Nav dropdown “Company” is easy to use and does not disappear too easily.
5. Company routes to Mission page.
6. Fix SEO structure to encourage Google sitelinks: Research, Blog, Careers, Company.
7. Remove/rename “stitch” Series A link. Remove duplicate links going to same page.
8. Homepage CTA replaced with “Contact us”, add top-right “Contact us” button.
9. New Contact Us page with branching Typeform flow (Customer B2B, Media, Investor, Other).
10. Submissions go to dashboard AND email Google Group notifications.
11. Moving logos section copy updated + spacing reduced + meaning clarified.
